

Edlington Community Profile

Well Doncaster 2021

“The majority of the people who live in Edlington are the salt of the earth. Good down to earth hard working socially minded folk.”

“Good community spirit”

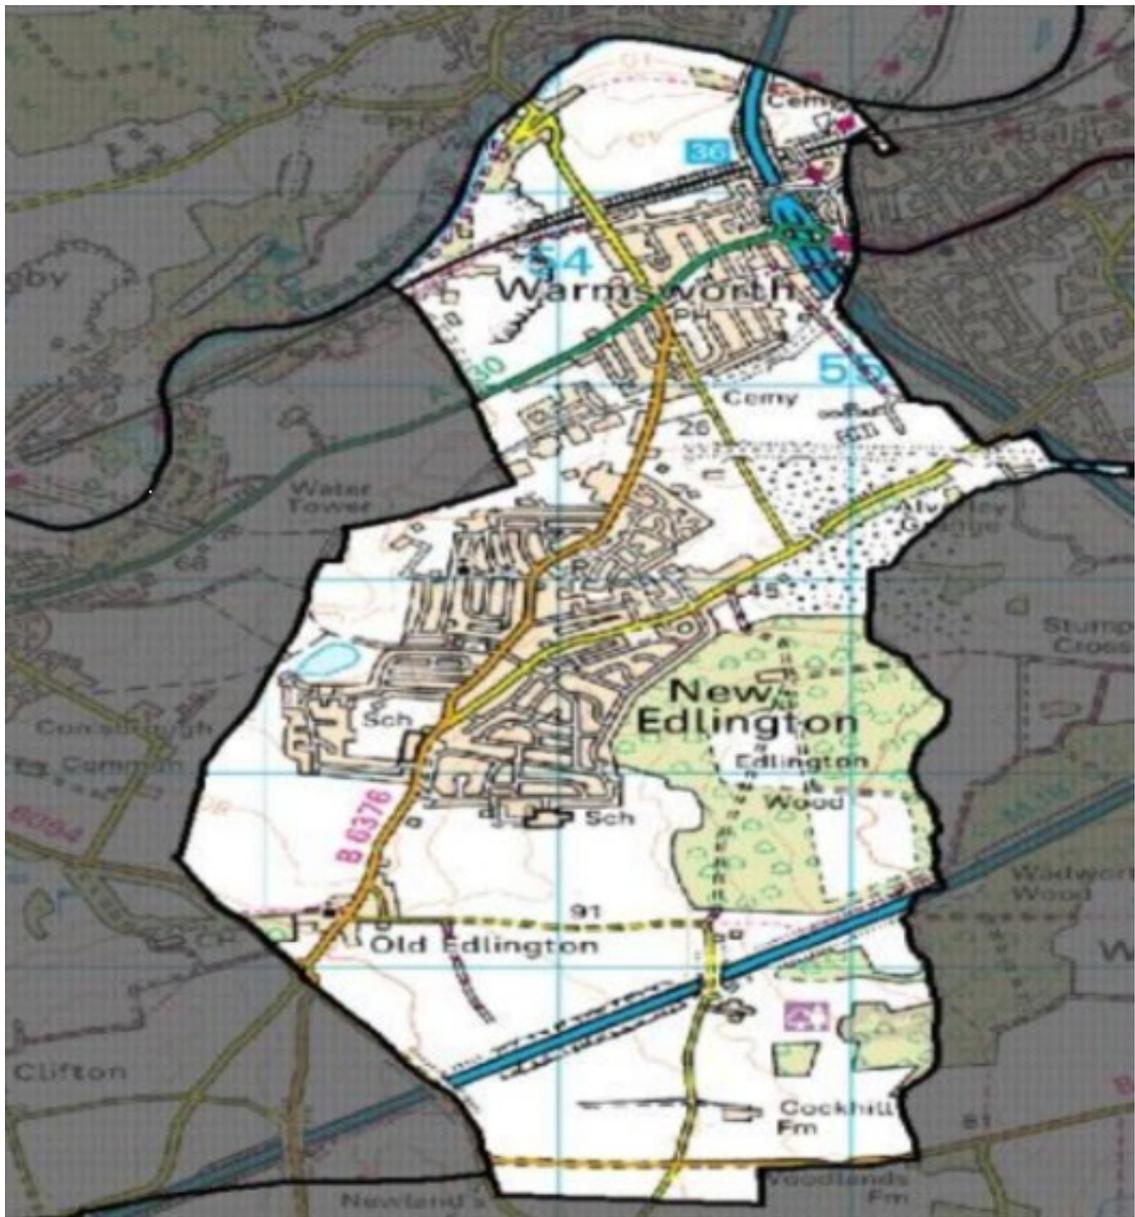

Figure 1- Edlington and Warmsworth Ward Boundaries

This Report

This report focuses on Edlington, which shares an electoral ward with Warmsworth in the South of the borough. The report begins with a one-page summary outlining key information and priorities for the area. This document shows the initial conversations with communities, including ward members, community organisations, faith groups, residents and other organisations who work in the area. Communities' knowledge of their own areas enables them to identify their strengths and the assets on which they can build on. This document is shared with the intention of supporting those conversations and sharing information that might not be readily available to local people.

Doncaster Talks 21

In 2019 Doncaster Talks undertook insight across the borough of Doncaster. Responses were separated into wards and thematically analysed. Across Edlington and Warmsworth ward, 188 responses were received (1.59% of the Ward) and the main themes on what people liked about the area, what could be improved, and what the borough should focus on are displayed in the table below. 21

Social & Community - 31.4%
of children living in poverty

Physical Activity - Inactive
households with children
and young people, alongside
high levels of childhood
obesity, particularly as they
enter year 6, and adult
obesity.

One page Summary

Edlington and Warmsworth are two distinct communities with different levels of need and population size. This report will focus on Edlington: rich in physical assets such as community buildings and a thriving third sector with a number of large anchor organisations active in the community.

Edlington has a high population of working-age adults and the ward's overall age composition is in line with that of the English population. The community continues to be predominantly White British.

Most of the housing within Edlington are social rented stock. This tenure composition is significantly different to the Yorkshire and Humber benchmark. The housing stock type is primarily terraced or semi-detached properties, matching the highly dense profile of Edlington.

Poverty and deprivation are significant challenges in Edlington. Unemployment and long-term unemployment figures are higher than national rates amongst working- age adults. Many children are currently living in poverty, and this is likely to be a significant contributing factor of poor child development and lower educational levels. It is vital to consider how poverty can be mitigated through actions that support the community and improve the health of its residents.

People in Edlington have a lower life expectancy and live more years in poor health than the average person. There are also higher levels of feeling low, self-harm and depression. The proportion of people who report their health as bad or very bad or who have a long-term limiting illness is significantly higher than figures reported for Doncaster and England. A large percentage of residents live with conditions related to poor lifestyle choices such as coronary heart disease which is greatly associated to obesity. Edlington's obesity rates are significantly higher for children and adults, whereas there are low levels of people of all ages engaging in physical activity.

Key Priorities

The following data has been taken from Public Health Fingertips which can be found in the [appendix](#). Edlington has a range of health priorities, which are as follows:

- Poverty is a key issue with 26.5% of children living in poverty and levels of unemployment are high (4.3%).
- Low school attainment, particularly at secondary school.
- Poor healthy life expectancy - it would be important to consider risk factors for respiratory and circulatory conditions such as high levels of smoking and alcohol consumption.
- Inactive and deprived households with children and young people.
- High levels of childhood obesity (particularly as they enter year 6) and adult obesity.

Health and Wealth

Poverty

Health inequalities are avoidable differences across the population and between different groups within society. Health inequalities arise from the conditions in which we live, work and play. These conditions influence our opportunities for good health, how we think, feel and act, therefore shaping our health and wellbeing.

Evidence shows that people living in our most deprived areas face the worse health inequalities in relation to health access, experiences and outcomes. Deprivation covers a range of issues and refers to unmet needs caused by a lack of resources, including but not limited to finances, housing and education. It is measured in different ways including the Indices of Multiple Deprivation (IMD).

Doncaster is one of the 10% most deprived communities in England. Edlington has a significantly different index of multiple deprivation (32.2) to England (21.7) and Doncaster (30.3).

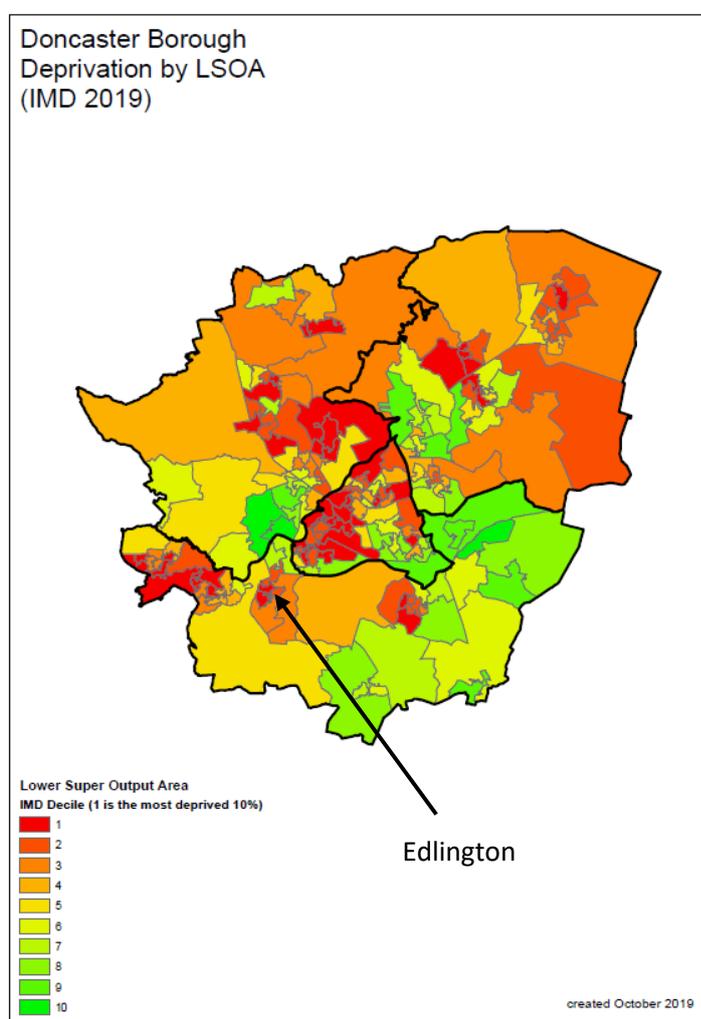

Figure 2 - Doncaster Heat Map of LSOA Deprivation

Poverty

A significantly high percentage of people in Edlington (17.6%) are experiencing income deprivation, compared to England’s rate of 12.9%. The impacts of poverty are felt across the life course with 26.5% of children living in poverty; this is significantly higher than the average of England (17.1%) and the borough (22.7%). Also, 16% of older people are living in deprivation compared to 14.2% across England and 15.9% in Doncaster.

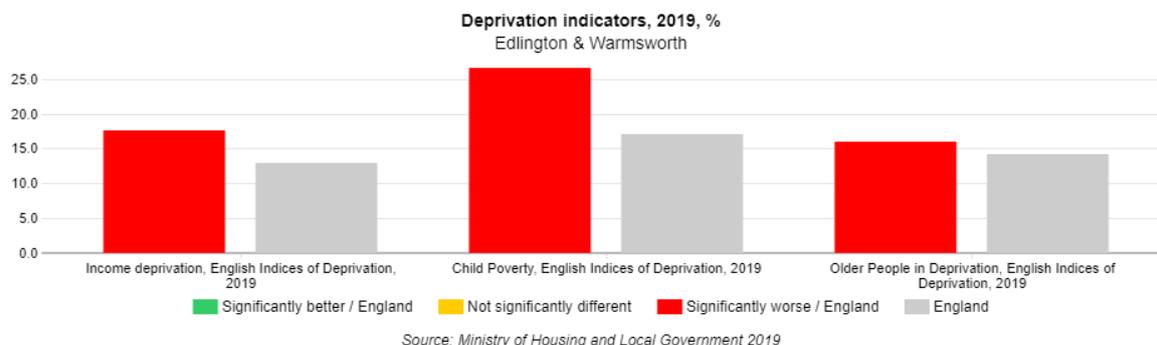

Figure 3 - Deprivation indicators

23.6% of the population in Edlington live in homes eligible for means-tested benefits. More children in the area are living in workless households in comparison to the rates in Doncaster and 17% of pupils are eligible for free school meals compared to the borough average of 16%.

Health priorities

Child Development

Children in Edlington match the average of the borough for child development at age 5. The Early Years Foundation Stage (EYFS) sets standards for the learning, development and care of children from birth to 5 years old and includes a framework against which to assess child development as children reach the age of five. In 2017, 51.91% of 5 year-olds achieved this standard. However, only 36% of 16

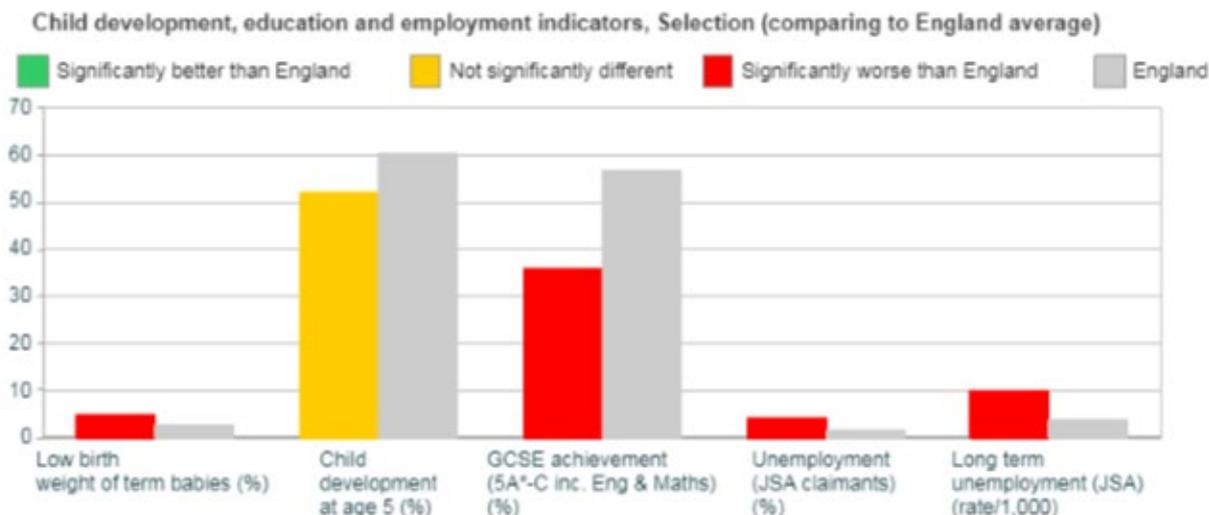

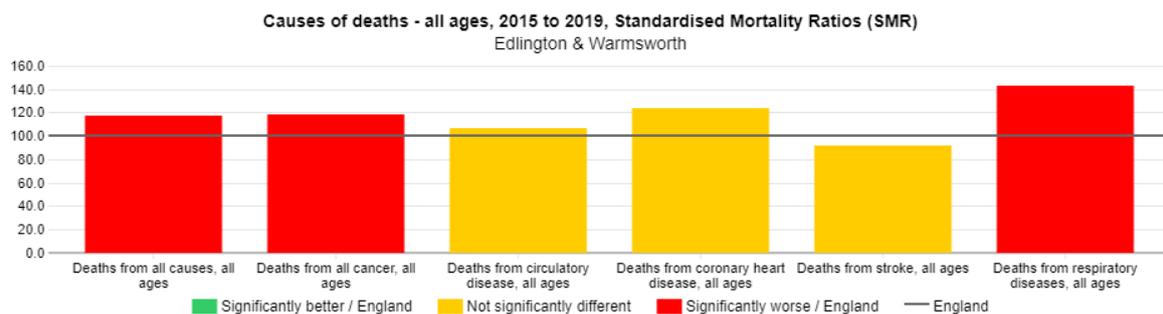

Figure 5 - Child development, education and employment indicators compared to England, 2017

year-olds are achieving 5 A*-C at G.C.S.E level in Edlington compared to the borough’s average of 49.1%. At reception, 10% of the children are severely obese and 23.3% are overweight. At year 6, these figures increase to 21% and 33.3%, respectively. The 2017 Pupil Lifestyle Survey for Edlington has responses from primary schools and indicated that 20% of respondents engaged in physical activity that caused them to get out of breath and/or sweaty in the week before the survey, compared to 28% that said they did not engaged in any. This is 8% higher than the borough average. It is important to note that the Pupil Lifestyle Survey is self-reported and was not completed by all schools.

Long Term Health Conditions

The proportion of residents self-reporting poorer health in Rossington is considerably higher than the borough and national averages. Approximately 22% of the population reported living with a limiting illness or a long-term health condition.

A key health priority for Edlington is the prevalence of respiratory and circulatory conditions. Emergency hospital admissions for chronic obstructive pulmonary disease (COPD) are two times the figures for the rest of England; lung cancer is the most prevalent cancer and COPD is the leading cause of mortality in the area. Respiratory conditions are largely caused by smoking and smoking prevalence is 22.8%: this number is significantly higher than the average of the borough (19.7%). The high numbers of emergency hospital admissions suggest challenges for patients to self-manage their heart and respiratory conditions.

Source: Public Health England, produced from Office for National Statistics (ONS) data

Figure 5 - Causes of death-all ages in Edlington, 2015-19

Circulatory conditions, including coronary heart disease, are the leading cause of premature death in Edlington. When looking at the risk factors associated with heart conditions, 25.9% of adults binge drink and there are significantly higher hospital admissions for alcohol-related harm. Further, 30.3% of adults are obese and only 16.7% engage in healthy eating. Edlington also has significantly high rates of cholesterol and high blood pressure.

The data below shows the percentage of the population in Edlington with a diagnosis of different health conditions.

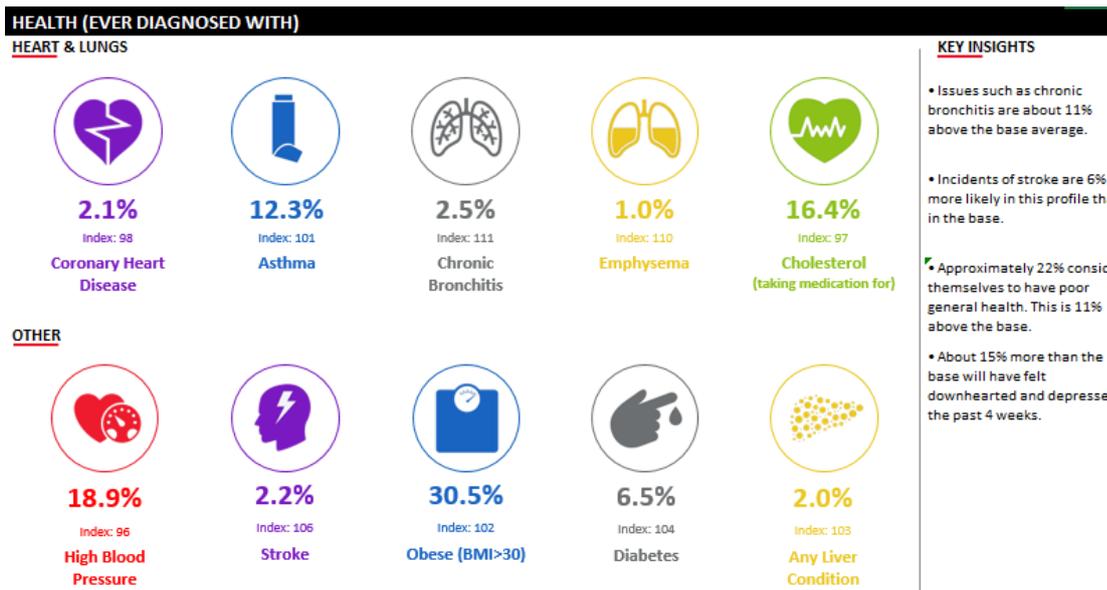

Figure 6 - Prevalence of diseases in Edlington

Loneliness and Isolation

There is a high level of older people living alone in Edlington (33%) in comparison to 31% across Doncaster and England. Whilst this does not necessarily imply loneliness and/or isolation, it is an indicator to be considered alongside local intelligence..

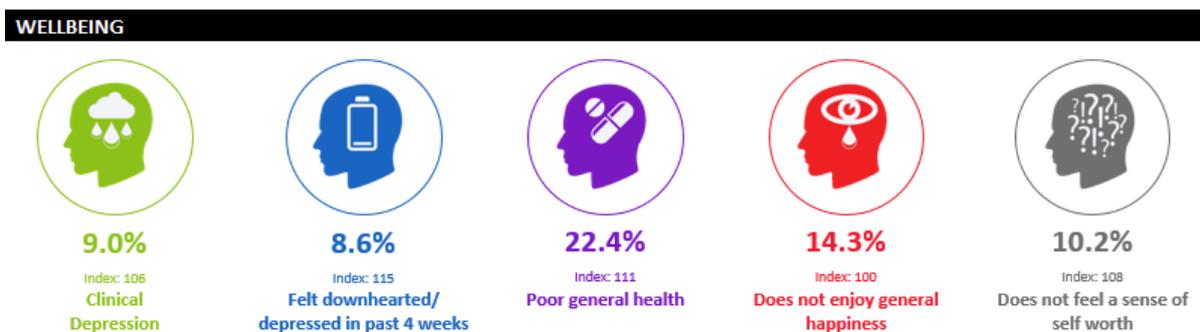

Figure 6 - Wellbeing for residents in Edlington

Life Expectancy

People living in Edlington have a lower life expectancy and live more years in poor health in comparison to the averages of Doncaster and England. Life expectancy for men is significantly lower in Edlington (77.7yrs) then England (79.7yrs). Life expectancy for women in Edlington (81.9yrs) is in line with England (83.2yrs)

Men are expected to develop a health condition at aged 56 and women aged 57, therefore decreasing the opportunity of living in better health by 6.9 years and 7 years, respectively. The following chart shows the differences in life expectancy and health life expectancy (how long it is expected to live in good health).

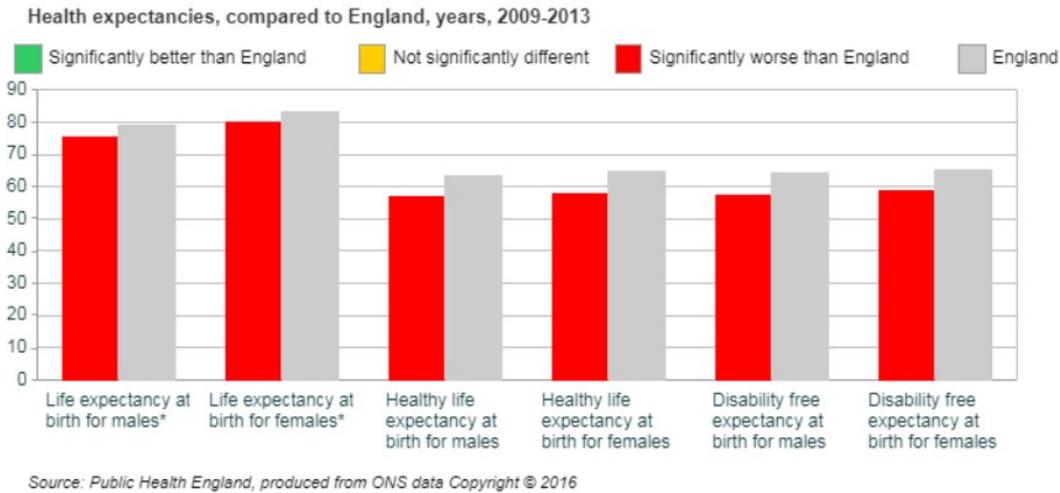

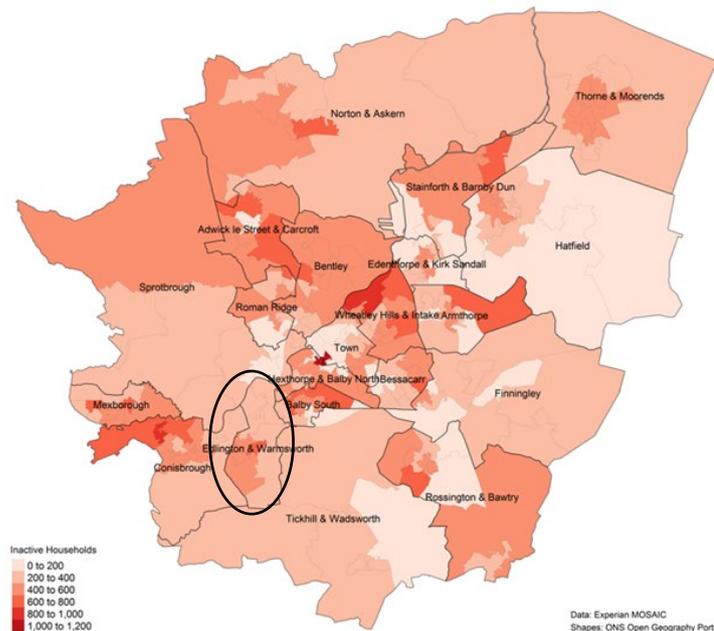

Figure 7 - Life expectancy compared to England

Physical activity

Most of the information in this section is taken from Mosaic data and more information about Mosaic can be found in the [appendix](#).

Levels of physical activity in Edlington are low compared to the rest of the borough as seen in the map below which identifies the areas with the highest number of inactive households:

Figure 8 - Mosaic map of physical activity levels in Doncaster

Edlington has 667 households that are likely to have high levels of inactivity. This data has been matched with the number of children and young people and with deprived, inactive households. The former data positions Edlington as an area of focus and priority for the Get Doncaster Moving Strategy. The table below shows the number of households in the priority areas of inactive, low incomes and households with children and young people:

Name	Inactive	Low Incomes	C&YP	Total
Adwick le Street	883	877	920	2680
Denaby	951	913	514	2378
Wheatley Park & Wheatley Hills	802	885	667	2354
Bentley	883	692	773	2348
Edlington	667	858	726	2251
New Rossington	673	823	749	2245
Intake	651	781	668	2100
Skellow & Carcroft	594	892	563	2049
Stainforth	618	738	676	2032
Thorne	747	817	367	1931

Figure 9 - Get Doncaster Moving table for inactive households include those on low income and children and young people.

The following information was collated and written by Sheffield Hallam University, The University of Manchester and Get Doncaster Moving. It provides an analysis and evaluation of the current levels of physical activity in the community which were previously identified as low. A face-to-face household survey was completed in 2018 and collated in 2019 by 1,120 respondents across Doncaster using a questionnaire designed to (i) assess levels of physical activity in accordance with Sport England classifications and (ii) explore key issues around engagement in physical activity utilising the robust COM-B behavioural science approach (Michie et al., 2011).

Adults Physical Activity

In Edlington, 131 responses were collected from different households. The mean amount of time adults reported being active each week was 244 minutes which was the third highest level out of the eight communities. The physical activity classifications for Edlington are presented below.

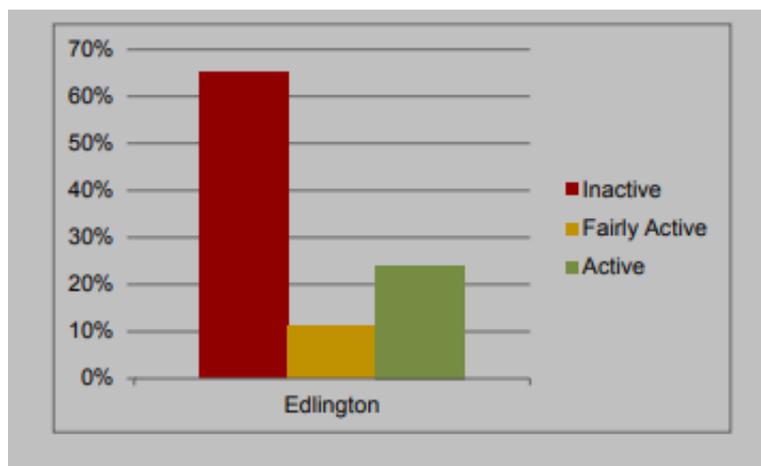

Figure 10 - Percentage of adults in each physical activity classification in Edlington

Sedentary Behaviour

In Edlington the mean reported sitting time for participants was 243 minutes on a working day. On a non-working day it was 364 minutes which was the 5th lowest level of sedentary behaviour out of the eight communities

Active Travel

In Edlington 41 participants reported being employed or in education, 14 of those participants reported active travelling to their place of work or study. The mean time spent active travelling each day was 19 minutes a day, which accounted for 85% of their commute.

Young People Physical Activity

In Edlington 41 households reported having young people and the mean reported for physical activity time outside of school was 162 minutes a week. This was the 44th lowest amount of young people's activity over the eight communities analysed.

COM-B Results presents the Capability, Opportunity, and Motivation scores for participants based on the physical activity classification they are in.

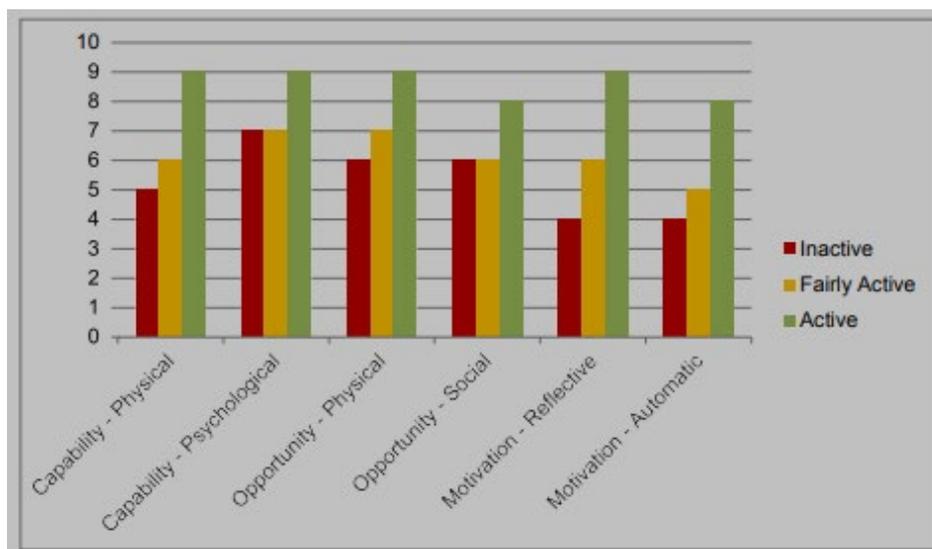

Figure 11 - The COM scores for participants in each physical activity classification for Edlington

In Edlington, participants who were active rated their capability, opportunity and motivation as being higher than those who were fairly active and inactive. Participants in Edlington who were inactive gave particularly low ratings to automatic motivation (indicating that they did not have habits or routines for physical activity), reflective motivation (indicating that they had lower intentions to be physical active), and physical capability (indicating that they perceived fewer skills and/or less stamina to be physically active). These might be particular areas to focus on in terms of future interventions.

Prevention and Control

Personal Protective Equipment

Personal protective equipment (PPE) packs, which include hand sanitisers, gloves, wipes and masks have been provided through donations from third sector organisations who operate in and around Edlington to prevent the spread of coronavirus. Here is a list of the groups that have received support:

- Edlington Community Organisation - 36 PPE packs and 500 Masks
- Helping Hands - 51 PPE packs
- Firefly - 2 PPE packs
- Aspiring2 – 12 PPE packs

Testing

The closest testing station for Edlington residents was the Ivanhoe Centre, a testing van as also available for use.. Figure 14 outlines where residents who accessed the testing centre were from.

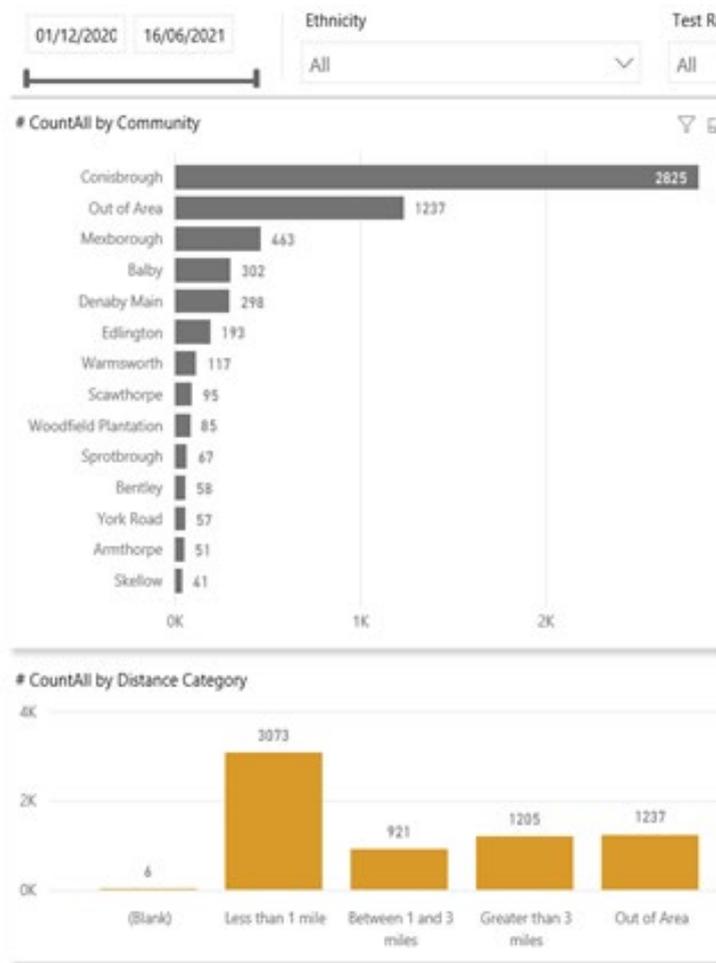

Figure 12 - Testing uptake for Doncaster residents

Vaccination

Vaccinations can be accessed at either Dearne Valley Leisure Centre or Keepmoat which are both within a 5 mile radius of Edlington, or at their GP or at Doncaster Royal infirmary. Below are the details of the vaccine uptake in Edlington which is lower than the rest of the borough.

Figure 13 - Vaccination uptake for Edlington residents

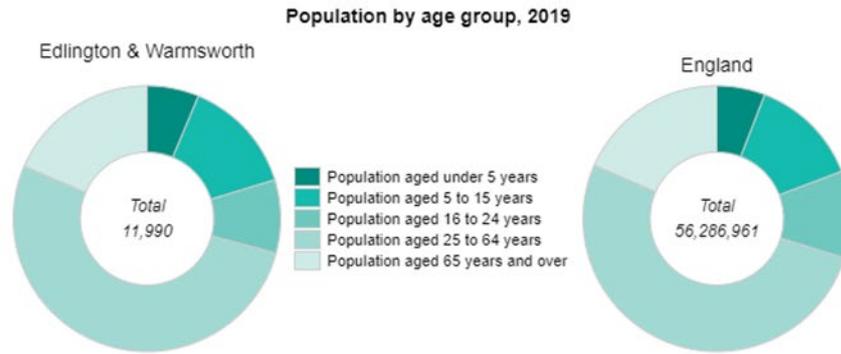

Recovery

The Coronavirus pandemic has had a huge impact on our communities and work continues to focus on the recovery stage of the pandemic. As a part of the recovery approach, Well Doncaster have secured funding from the Ministry of Housing Communities and Local Government for Third Sector organisations across the borough to employ Community Connectors. Their role comprises understanding the barriers and work with residents to create solutions that increase vaccination uptake and compliance to social distancing in disadvantaged groups. They also encourage and support those most affected by COVID-19 and engage them in community events and services. For the South of Doncaster, the Connector is continuing to engage with residents through face-to-face conversations.

Community Information

Population and Diversity

Edlington is located in the South of the borough and is in the same electoral ward as Warmsworth, 5325 of which are working-age (25–64 years old). The ward’s overall age composition is in line with that of the English population. The community continues to be predominantly White British, with only 2.2% of the population from a Black, Asian & Minority Ethnic (BAME) group. This percentage is half the average of the borough.

Source: ONS + Office for National Statistics (ONS) Small Area Mid-year Population Estimates + Office for National Statistics (ONS) Small area

Figure 14 population of Edlington and Warmsworth Ward

Housing

Housing conditions and the surrounding environment can have profound impacts upon residents' health and exacerbate health inequalities.

Housing data for the Lower Super Output Areas (LSOA) that make up Edlington is available. This data explores several variables to analyse the housing stock.

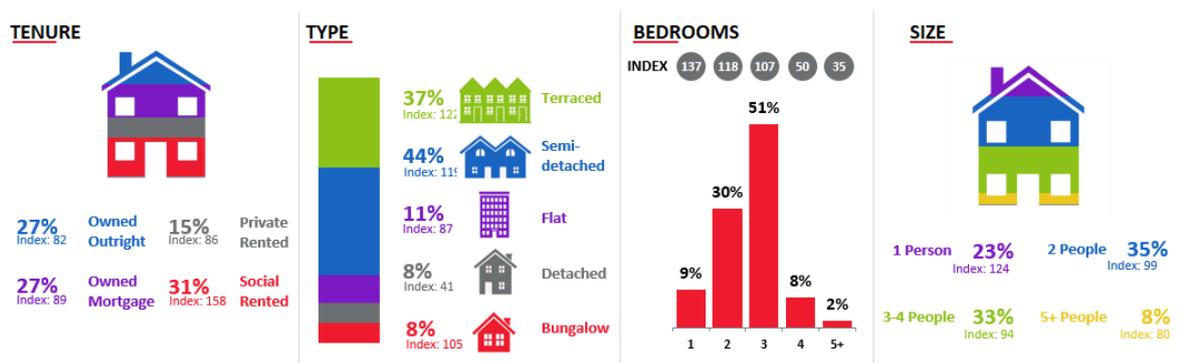

Figure 15 ACORN data, housing in Edlington at LSOA level

The majority of housing within Edlington are social rented stock, with owned properties comprising only 27% of households. This tenure composition is significantly different to the Yorkshire and Humber benchmark. The housing stock type is primarily terraced or semi-detached properties, matching the highly dense profile of Edlington.

Employment

Edlington has a population of 7,786 with 4,106 people of working-age. Edlington has an unemployment rate of 4.3% which is significantly higher than the rate of the borough (3.7%) and England (2.8%).

The Universal Credit claimant rate has changed over time and has increased as seen in the graph below. It is currently 7.7%. The number of claimants has fluctuated over the last three years but remains consistently high across the ward and at LSOA level. Individual LSOA data can be found in the [appendix](#).

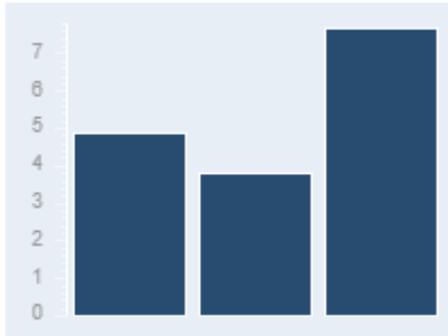

Figure 16 – Universal Credit Claimant rates in August 2015, 2019 & 2020

To be noted is that one area has significantly higher numbers than the rest of the ward; at the end of February 2018 the number of claimants were four times the number of the lowest area. This is shown with the black arrow on the map below. It would be useful to understand the composition of the population of this area, the conditions affecting people’s ability to work and the accessibility to available support. This area is also the most deprived area of the ward.

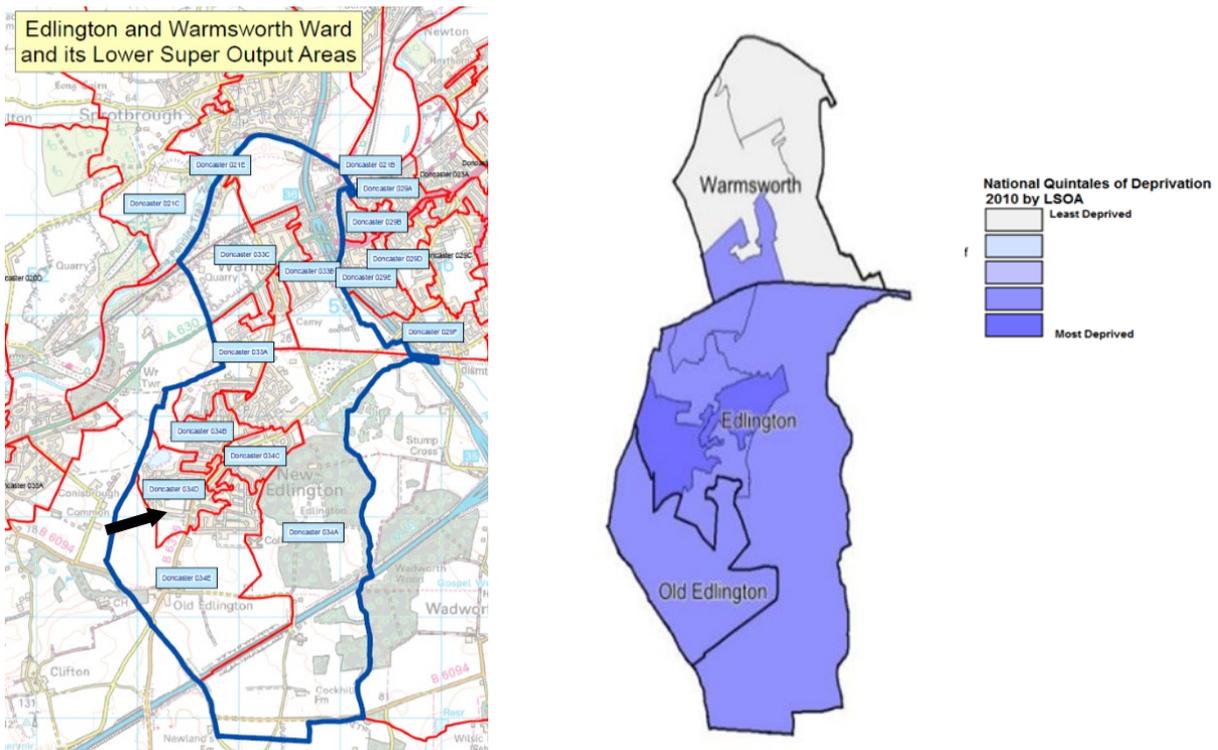

Figure 17 - LOSA super output area

Community Insight

Appreciative Inquiry

The Well Doncaster Team undertake Appreciative Inquiry (AI) within communities to gather insight to support code signing action plans with the community. Armstrong (2020) suggests in 'A changing world, again. How Appreciative Inquiry can guide our growth' that reframing the questions in light of a crisis like Covid-19 and drawing on strengths and assets from past positive experience will help participants as they restructure their community. The AI questions are structured to pull out the successes of the past and present, to seek new potentials and possibilities and build on those through the Dream and Design stages.

The Appreciative Inquiry will include the following steps:

1. **Discovery Phase** – This will involve engagement with the residents of Hyde Park to find out what is working well in the community. Responses will be themed to allow priorities of the community to be established.
2. **Dream** – Residents and key stakeholders will be invited to attend an initial workshop to discuss what ideas they have for their community and how these will meet the priorities highlighted in the discovery phase.
3. **Design** – All attendees are invited back for a second workshop to develop an action plan to direct work for the community.
4. **Destiny** – A collaborative way of working and investing resources to meet the actions from the previous phase.

Well Doncaster has been working in Edlington since 2019 via 6 Community Explorers and 24 interviews. The themes from the past Appreciative Inquiries are as follows:

- Access to facilities for physical activity
- Environment and cleanliness
- Safety
- Physical activity

In 2020, an online Appreciative Inquiry was undertaken, from this the following themes were identified:

- Environment
- Activities
- Community Spirit
- Economy
- Safety
- Green Space
- Youth Provision

Youth Provision was the top theme from the AI in 2020, however, a gap analysis from younger people was identified. To gather more insight from this group around their experience living in Edlington, an art competition ran in two primary schools across all year groups. The responses were themed as follows:

- Play/Greenspace
- Services
- Humanitarian
- Environment
- Safety
- Economy
- Events
- Infrastructure
- Health

Further investment in activities aimed at young people that could allow them to play safely in their community was an identified need.

[Doncaster Talks](#)

In 2019 Doncaster Talks undertook insight across the borough of Doncaster. Responses were separated into wards and thematically analysed. Across Edlington and Warmsworth ward, 188 responses were received (1.59% of the Ward) and the main themes on what people liked about the area, what could be improved, and what the borough should focus on are displayed in the table below.

Like

- Community, friendly, neighbours
- Parks and greenspaces
- Quiet

Improve

- ASB including gangs and youth, bikes
- Police presence and response
- Litter and cleanliness

Focus

- Investment in local economy, jobs, town centre and business diversity
- Police on streets
- Crime and ASB
- Youth services and opportunity

Assets

Edlington is a relatively rural, former mining community, and its assets are spread throughout the area. It should be noted that these maps are a starting point in understanding the community and that further work is needed amongst the community to understand all the assets and how they are used.

The maps below show different types of assets across Edlington. These have been developed using ward boundaries rather than Middle Layer Super Output Areas (MSOAs). Larger versions of these maps can be accessed in the [appendix](#).

Green Space Assets

Martin Wells Lake an important asset to the community that can be used to promote health improvement and enhance community cohesion and is overseen by Friends of Martin Wells Lake. This group together with Edlington Community Organisation, have lead various events, litter picks and have revamped the green space with new paths, gym equipment and benches.

Edlington Pitwood has been named as one of the Future Parks in which a £1.8m investment from Sport England has been launched to maximise opportunities from the Local Delivery Pilot (LDP) to enhance green spaces in Doncaster. More information on the LPD can be found in the [appendix](#).

As well as ensuring that there is access to green space, Doncaster Council has also declared Air Quality Management Areas (AQMAs). Further links can be found in the [appendix](#).

	Warmsworth Community Library	DN4 9LW

It is recognised that work is needed in the community to expand the understanding of who, how and what is accessed in the area. Greater knowledge of the identity of each community/ward will allow a more appropriate and effective response to community needs. Edlington remains a priority area for South Doncaster and ongoing work will continue to support it.

To see an interactive version of these maps please see [appendix](#).

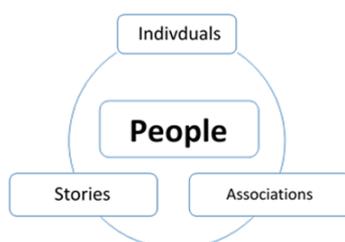

Population Health Management

Covid-19 has had a huge impact on communities. It is vital to understand the effect and direction the pandemic has had on community organisation in the ward so that: 1) support can be offered and 2) work can be implemented to manage any gaps or risks associated with changes. To support the former, Well Doncaster officers undertake regular population health management insight with community organisations in Edlington identifying their current status and needs, and work with each group to meet their goals. This is a living document and will be updated and adapted as needs are met and change. If you would like more detail on this please contact welldoncaster1@doncaster.gov.uk. As part of a population health management approach, the following assets have been identified and themed around people and places:

Institutions (Schools/colleges etc.)	Physical space (Parks, car parks etc.)	Local Economy (Local profit Businesses)

Well Doncaster Annual reports

Well Doncaster Approach: <https://youtu.be/e1RKOZoGI10>

More information about how Well Doncaster has been meeting outcomes and objectives can be found in past and present annual reports:

<https://welldoncaster.wordpress.com>

Mosaic Data

Mosaic Public Sector classifies the UK population into one of 66 types and 15 groups through a detailed and accurate understanding of each citizen's demographics, lifestyles, behaviours and location.

The Physically Inactive Population of Doncaster

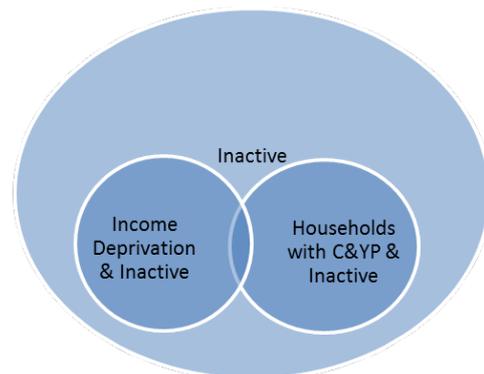

The MOSAIC types who "Do not exercise" and "Do not take part in Sport" were searched and three priority groups have been identified through work with strategic partners as part of the development of Doncaster's Physical Activity Strategy. The three priority groups are:

The Inactive

Families with children and young people

People living in income deprivation

These groups are cross-referenced against the inactivity list allowing for the identification of MOSAIC types which are both likely to be inactive and living in deprivation as well as inactive and from households with children and young people.

Acorn profiles

Wellbeing Acorn segments the population into 4 groups (Health Challenges; At Risk; Caution; Healthy) and 25 types describing the health and wellbeing attributes of each postcode across the country. By analysing significant social and health related behaviour, it provides precise information and an in depth understanding of upstream issues affected by current lifestyle traits.

INTERPRETING THE REPORT

The Wellbeing Acorn profile report helps you understand the underlying demographics, lifestyle and health attributes of your customers and service users by comparing their Wellbeing Acorn profile to a base (e.g. UK population, area or other customer groups).

INDEX

The Wellbeing Acorn Profile contains 12 variables that are indicators of Disability or Infirmary in the population and 9 variables related to unhealthy behaviours. The average score measured against the base profile of Yorkshire and the Humber is 100. A value above 100 indicates that the area population is over represented for this characteristic, below 100 the value is less than the average or under represented.

Public Health Data Fingertips

This is a new fingertips profile that uses data from Local Health an existing PHE data tool. Local Health is a collection of quality assured health information presented for small geographical areas. By presenting data for small areas, Local Health provides evidence of inequalities within local areas. It supports targeted interventions to reduce such inequalities.

Local Health contains indicators related to:

- Population and demographic factors
- Wider determinants of health
- Health outcomes

It presents data for middle super output areas (MSOA), electoral wards, clinical commissioning groups (CCG), local authorities, and England as a whole.

Please note, as the Local Health tool was designed to allow users to map small area data, a mapping option has not been provided in this profile.
